## ASU biomed startup “Endovantage” takes second in Venture Madness

by *wvanduyn*     *Comments are off*

An ASU BME developed startup, Endovantage, competed in Venture Madness, an ed-tech and med-tech competition for capital.

Endovantage placed second in the competition, securing \$10,000. The EndoVantage technology was initially developed at the Image Processing Applications Laboratory in the School of Biological and Health Systems Engineering at Arizona State University. Using advanced mathematics, computer modeling, and mechanical and fluid dynamics, Ph.D.s David Frakes and Haithem Babiker developed the EndoVantage Interventional Suite (EVIS), a groundbreaking treatment planning solution in the cloud that utilizes real patient data to plan patient-specific endovascular treatments and review the outcomes before surgery.
